

# COMMERCIAL AIR DUCT & HVAC SYSTEM CLEANING

## Is the air you are breathing healthy & safe?

Let the experts at Tri State clean your air ducts and HVAC systems to NADCA and EPA standards with our state of the art Abatement Technologies HEPA-Aire H2500iv. Our three-stage HEPA-filtered system is powerful and portable. No matter the size of your system, with the H2500iv we have power to spare to clean your system better and more efficiently than any other company. Source removal duct cleaning uses a technically advanced, high-efficiency particulate (HEPA) filtrated vacuum system that places the duct system under vacuum or negative pressure. We collect debris and contaminates from the duct and vents and put clean air back into the environment.

### The Cleaning & Inspection will include:

1. We will clean your system to NADCA standards and EPA guidelines
2. Clean the interior of the air handler
3. Clean the blower assemblies
4. Clean the return and supply plenum and ductwork
5. Clean the evaporator, heating and condenser coils and drain pan
6. Physically remove dirt, debris and other contaminants from commercial ductwork systems.
7. Place the section of the duct system being cleaned under negative pressure to pull dislodged contaminants out of the duct system to capture them and ensure they don't leak out into your building.
8. The best people, process and equipment.
9. Replace filters (optional)
10. Test the air Quality before and after(optional).

Our equipment and process is ideal and approved for use in hospital and extended care facilities. Schools, institutions, retail, manufacturers and office buildings – no job too big or small.

Does your building meet the EPA air quality standard? Stop holding your breath – breath and call Tri State now

Dirty Air Duct
